

Amendments to the Specification:

Please amend the abstract at page 18, lines 1-14, as follows:

ABSTRACT

A1 A device, a system and a procedure to reduce the signalling load in a cellular mobile telephone system ~~which support~~ that supports packet switched services ~~are described~~. One ~~in the mobile telephone system included~~ of a set of mobile station stations included in a cellular mobile telephone system is switched between a first mode in a first state, here called Ready State, respective to a second state, here called Standby State, depending on a time parameter which indicates a time ~~during which~~ when the mobile station shall remain in the first state, ~~in order to after that~~ to switch to the second state afterward. The value of the time parameter is set currently depending on the current speed of the mobile station through the cell network of the mobile telephone system.
